
**咀签属** ju qian shu

Shrubs climbing, usually with tendrils, unarmed. Leaves alternate, with caducous stipules, petiolate, pinnatifid or 3-veined from base, margin entire or dentate. Flowers polygamous, in terminal or axillary, cymose racemes or cymose panicles, often with tendrils at lower part of rachis or base. Calyx tube short, coadnate with ovary; sepals 5, ovate-triangular, adaxially medially keeled, dehiscing with longitudinal slits. Petals 5, spatulate. Stamens 5, dorsifixed, enfolded by petals. Disk thick, pentagonal or 5-lobed, glabrous or hairy. Ovary inferior, ± deeply immersed in disk, 3-loculed, with 1 ovule per locule; styles cleft to half or deeply cleft. Capsule subglobose, impressed on both ends, crowned by persistent limb of calyx, 3-winged, with 3 rounded locules split from axil at maturity; locules indehiscent or along inner rib narrowly fissured. Seeds 3, red-brown, shiny, obovoid; endosperm thin.

Twenty species: tropical and subtropical areas; two species in China.

1a. Leaves abaxially ferruginous tomentose or densely pubescent on veins ........................................... 1. *G. javanica*

1b. Leaves abaxially glabrous or veins sparsely pubescent .......................................................... 2. *G. leptostachya*

*Clematoclethra racemosa* H. Léveillé.

Shrubs climbing. Branchlets, petioles, rachis, pedicels, and calyx densely brownish pilose. Leaves alternate; petiole 0.8–1.7 cm, densely or sparsely pubescent; leaf blade ovate or broadly ovate, 4–11 × 2–6 cm, papery, abaxially ferruginous tomentose or at least ± densely pubescent on major veins, adaxially soon glabrescent, lateral veins 5–7 pairs, prominent abaxially, flat adaxially, basal veins with 3–6 outer secondary veins, base cordate or rounded, margin entire or obtusely serrulate, apex shortly acuminate or acuminate, rarely acute. Flowers polygamous, 5-merous, solitary or few fascicled in shortly pedunculate cymes, axillary or terminal cymose racemes, or cymose panicles to 30 cm. Pedicel ca. 1 mm. Sepals triangular, adaxially rostellate on midvein. Petals obovate, ca. as long as stamens, shortly clawed at base. Disk pentagonous, surrounding ovary, each angle elongated into a liguliform appendage. Style long, 3-fid or cleft to half. Capsule yellow at maturity, 8–9 mm, 9–10 mm in diam., 3-winged, dehiscing into 3 subrounded winged mericarps, wing sometimes thickened at maturity; fruiting pedicel 1–3 mm, glabrous or sparsely pilose. Seeds brownish, shiny, obovoid, ca. 1 × 3 mm. Fl. Aug–Sep, fr. Oct–Dec.

Forests, often climbing on trees, thickets; low to middle elevations. W Guangxi (Napo), Yunnan [Bhutan, India, Laos, Malaysia, Myanmar, Nepal, Philippines, Singapore, Thailand, Vietnam].

1a. Fruit 12–13 × 13–18 mm ................... 2c. var. *macrocarpa*

1b. Fruit 9–10 × 10–12 mm.

2a. **Gouania leptostachya** var. *leptostachya*

**咀签** (原变种) ju qian (yuan bian zhong)

Stipules lanceolate, caducous, not becoming a bract. Fruit 9–10 × 10–12 mm.

2. **Gouania leptostachya** Candolle, Prodr. 2: 40. 1825.

**咀签** ju qian

Shrubs climbing. Young branches glabrous or sparsely pilose. Leaves alternate; stipules lanceolate and caducous, or persistent and becoming a rounded, dentate bract; petiole 1–2.5 cm, sparsely or densely pilose; leaf blade abaxially pale green, adaxially dark green, ovate or ovate-oblong, 5–9 × 2.5–5 cm, papery, abaxially glabrous or sparsely hairy on veins, lateral veins 5 or 6 pairs, prominent abaxially, lower lateral veins with 3–5 secondary lateral veins, base cordate, margin crenate-serate, apex acuminate. Flowers polygamous, 5-merous, solitary or few in fascicules and shortly pedunculate cymes, axillary cymose racemes, and terminal cymose panicles to 30 cm, pi-
Sparse forests, often climbing on trees; middle elevations. W Guangxi (Napo), Yunnan [Bhutan, India, Laos, Malaysia, Myanmar, Nepal, Philippines, Singapore, Thailand, Vietnam].

越南咀签  yue nan ju qian

Stipules persistent, often becoming a rounded, dentate bract, base amplexicaul, margin sharply denticulate.

Forests, thickets; low to middle elevations. S Yunnan [Laos, Vietnam].

大果咀签  da guo ju qian

Fruit 12–13 × 13–18 mm, with thickened wing.

Forests; below 2000 m. S and SE Yunnan [Thailand, Vietnam].
