Fl. and fr. May–Jul.

Rocky slopes, Gobi desert; 500–3100 m. Xinjiang, Xizang [Afghanistan, Kazakhstan, Kyrgyzstan, Pakistan, Russia, Tajikistan, Turkmenistan, Uzbekistan; SW Asia].

This is a widespread and variable species, reaching the eastern limit of its range in W China. It is sometimes subdivided into more narrowly defined species or infraspecific taxa based on variations in leaf indumentum and spikelet size. Chinese material is referable to subsp. capsi, or Stipa capsi at specific rank. Stipa arabica subsp. arabica from SW Asia has lemmas 7–9 mm and awns not exceeding 9 cm. Stipa turgaica is based on a form with densely pilose leaf blades. Stipa arabica is a good forage grass in desert steppe regions.

Basal leaves 1/4–1/3 length of culms; leaf sheaths shorter than internodes; leaf blades acicular, convolute, 7–15 cm, outer surface glabrous; ligule of basal leaves 0.5–1.5 mm, rounded, ciliate, of culm leaves up to 2 mm. This species is easily recognized by its shortly plumose awn, spinulose lemma apex, and hairy basal sheaths. The long filiform glume tips are readily broken off, so that the spikelets appear to be much shorter. This is a spring forage grass in desert steppe regions.

Lasiagrostis tremula Ruprecht; Ptilagrostis purpurea (Grisebach) Roshevitz; Stipa purpurea subsp. arenosa (Tzvelev) D. F. Cui; S. purpurea var. arenosa Tzvelev; S. pilgeriana K. S. Hao.

Stony slopes, valley silt, sand or gravel flats; 1900–5200 m. Gansu, Qinghai, Sichuan, Xinjiang, Xizang [Kashmir, Kyrgyzstan (Pamirs), Tajikistan (Tien Shan)].

This species provides forage in mountain areas. At high altitudes it often occurs in Kobresia pygmaea turf.

Perennial, forming dense tussocks. Culms 30–75 cm tall, 2–3-noded. Basal leaves 1/2–2/3 length of culms; leaf sheaths longer than internodes; leaf blades acicular, convolute, 8–10 cm, outer surface sparsely pubescent; ligule of basal leaves lanceolate, 2–5 mm, of culm leaves 3–7(–12) mm. The combination “Achnatherum purpurascens (Hitchcock) Keng” (Claves Gen. Sp. Gram. Prim. Sin. 106, 213. 1957) was not validly published because Keng did not cite the place and date of valid publication of the basionym.

This is a forage grass in montane regions.
